Inventories, shipments and orders in manufacturing industries

July 1985

Stocks, livraisons et commandes des industries manufacturières

Juillet 1985

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto Credit Car	(973-6586) d only (973-86		(666-3691)

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

This publication was prepared under the direction of:

- Basil McCormick, Assistant Director, Industry Division
- Henry Glouchkow, Chief, Inventories Shipments and Orders in Manufacturing Industries

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Cette publication a été rédigée sous la direction de:

- Basil McCormick, Directeur adjoint, Division de l'industrie
- Henry Glouchkow, Chef, Stocks, livraisons et commandes des industries manufacturières

HIGHLIGHTS

July 1985

- Preliminary estimates show that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 4.0% to \$20,681.5 million in July from the revised estimate of \$19,888.2 million in June. Shipments of durable goods industries were up 5.9% to \$10,128.5 million from \$9,561.3 million. Increases of \$409.9 million in transportation equipment industries and \$94.9 million in wood industries accounted for most of the gain. Shipments in non-durable goods industries were up 2.2% to \$10,553.0 million from \$10,326.9 million. Increases of \$88.5 million in primary textile industries and \$50.9 million in paper and allied products industries were partly offset by a \$56.5 million decrease in chemical and chemical products industries.
- Seasonally adjusted inventories owned by manufacturers at the end of July were \$34,192.7 million, up 0.8% from the previous month's revised value of \$33,924.7 million. Total inventories held increased 0.8% to \$35,521.2 million from \$35,242.9 million with increases of 1.4% in finished products, 1.0% in goods in process and 0.1% in raw materials.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments went from 1.71:1 in June to 1.65:1 in July. The ratio of finished products inventory to shipments went from 0.62:1 to 0.60:1.
- The value of new orders received in July, seasonally adjusted, increased 4.4% to \$20,957.1 million from the revised June estimate of \$20,065.3 million. The revision to June data for new orders was larger than usual. The reports received since the first estimate of \$20,429.0 million was published, have had a higher than normal impact. In durable goods industries, new orders, with an estimated value of \$10,377.0 million, were 6.8% higher than the June value of \$9,715.4 million where increases of \$474.6 million in transportation equipment industries and of \$209.8 million in primary metal industries were partly offset by a decrease of \$136.3 million in electrical and electronic products industries. In non-durable goods industries, new orders were valued at \$10.580.1 million, up 2.2% from the revised estimate for June of \$10,349.8 million.
- The seasonally adjusted unfilled orders backlog at the end of July was \$22,645.7 million, up 1.2% from the revised June stimate of \$22,370.1 million. Unfilled orders increased 1.2% in durable goods industries to \$20,601.1 million from \$20,352.6 million at the end of June. In non-durable goods industries, unfilled orders were up 1.3% to \$1,044.6 million from \$2,017.5 million.

POINTS SAILLANTS

Juillet 1985

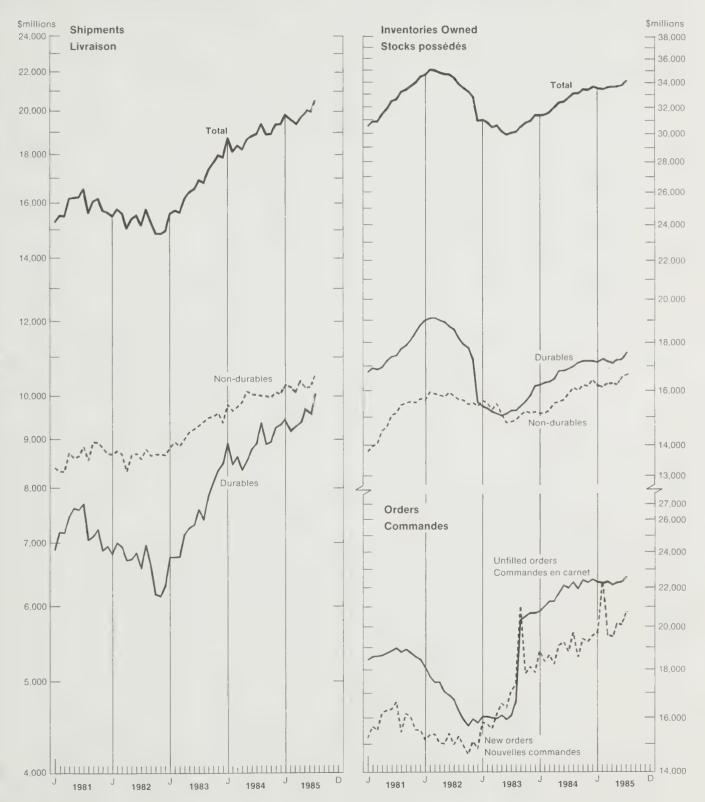

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$20,681.5 millions en juillet soit une hausse de 4.0% par rapport à la valeur revisée de \$19,888.2 million en juin. Une augmentation de 5.9% a été enregistrée pour les biens durables qui sont passés de \$9,561.3 millions à \$10,128.5 millions. Cette hausse est principalement attribuable à des hausses de \$409.9 millions dans les industries du matériel de transport et de \$94.9 millions dans les industries du bois. Les livraisons des biens non durables ont augmenté de 2.2% passant de \$10,326.9 millions à \$10,553.0 millions. Cette augmentation est principalement attribuable à des gains de \$88.5 millions dans les industries textiles de première transformation et de \$50.9 millions dans les industries du papier et produits connexes. Ces augmentations ont été en partie contrebalancées par une diminution de \$56.5 millions dans les industries chimiques.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,192.7 millions en juillet, une hausse de 0.8% par rapport à la valeur du mois précédent de \$33,924.7 millions. Pour leur part, les stocks détenus ont augmenté de 0.8% à \$35,521.2 millions de \$35,242.9 millions. Des augmentations ont été enregistrées au chapitre des produits finis (+ 1.4%), des biens en cours de transformation (+ 1.0%) et des matières premières (+ 0.1%).
- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisés est passé de 1.71:1 en juin à 1.65:1 en juillet. Le rapport des produits finis aux livraisons est passé de 0.62:1 à 0.60:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$20,957.1 millions, ce qui représente une hausse de 4.4% par rapport au mois précédent qui était de \$20,065.3 millions. La révision des nouvelles commandes de juin était plus prononcée qu'à l'ordinaire. Les rapports recu depuis la première estimation de \$20,429.0 millions ont eu un effet plus grand que normal. Dans les industries des biens durables, la valeur estimative de \$10,377.0 millions était supérieure de 6.8% à la valeur de juin de \$9,715.4 millions. Cette augmentation est principalement attribuable à des hausses de \$474.6 millions dans les industries du matériel de transport et de \$209.8 millions dans les industries de première transformation des métaux. Ces augmentations ont été en partie contrebalancées par une diminution de \$136.3 millions dans les industries des produits électriques et électroniques. Les nouvelles commandes des biens non durables ont atteint \$10.580.1 millions, soit une hausse de 2.2% par rapport à la valeur révisée de juin (\$10,349.8 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,645.7 millions en juillet, une hausse de 1.2% par rapport à la valeur de juin de \$22,370.1 millions. Les commandes en carnet des biens durables ont augmenté de 1.2% passant de \$20,352.6 millions à \$20,601.1 millions alors que celles des biens non durables ont augmenté de 1.3% à \$2,044.6 millions de \$2,017.5 millions.

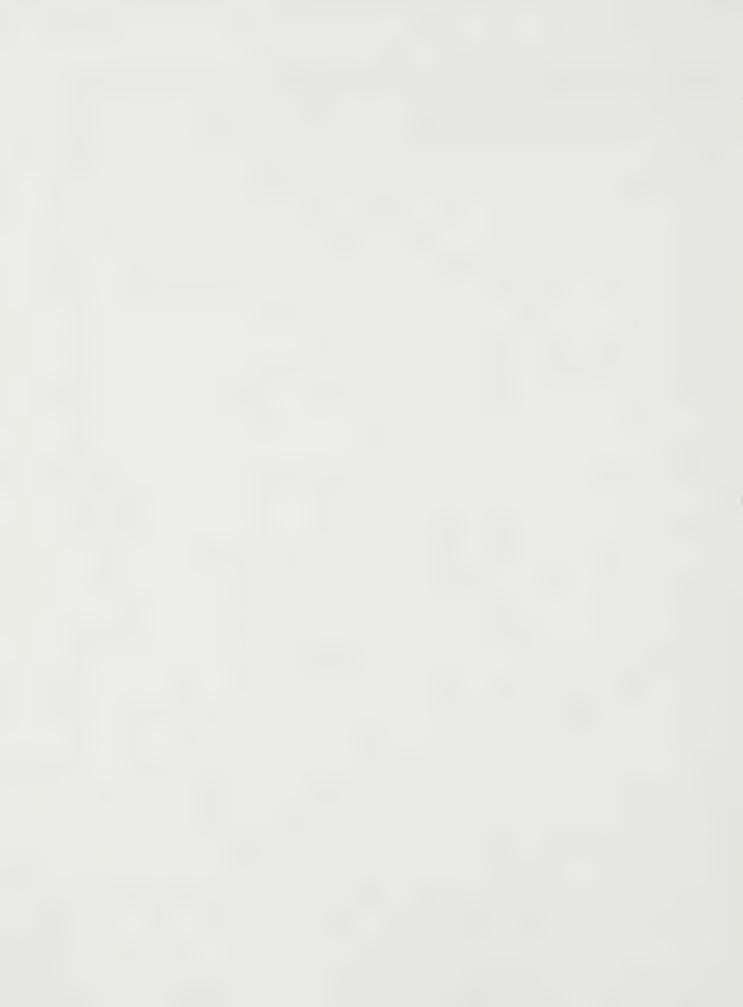

- Not adjusted for seasonal variation, manufacturers' shipments in July 1985 were estimated at \$19,247.4 million, 9.1% lower than the revised June value of \$21,166.8 million. Cumulative shipments for the first seven months of 1985, at an estimated \$138,620.8 million, were up 6.5% from the \$130,115.6 million estimated for the same period in 1984.
- On a estimé à \$19,247.4 millions les livraisons non désaisonnalisées en juillet 1985, ce qui représente une baisse de 9.1% par rapport à la valeur révisée de juin de \$21,166.8 millions. Pour les sept premiers mois de 1985, les livraisons estimatives ont totalisé \$138,620.8 millions, soit une hausse de 6.5% par rapport à \$130,115.6 millions obtenus au cours de la période correspondante de 1984.

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries; goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

 Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM, Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM, Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Inventories, shipments and orders in manufacturing industries

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

HIGHLIGHTS

August 1985

- Preliminary estimates show the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 1.5% to \$20,965.5 million in August 1985, from the revised estimate of \$20,649.9 million in July. Shipments of durable goods were up 3.4% to \$10,531.2 million from \$10,180.7 million. Increases of \$241.8 million in transportation equipment industries, \$91.2 million in fabricated metal products industries and \$83.3 million in machinery industries accounted for most of the gain. There was, however, a \$55.3 million decrease in primary metal industries. Shipments in non-durable goods industries were down 0.3% to \$10,434.3 million from \$10,469.2 million.
- Seasonally adjusted inventories owned by manufacturers at the end of August were \$34,375.9 million, up 0.3% from the previous month's revised value of \$34,287.9 million. Total inventories held increased 0.3% to \$35,754.4 million from \$35,640.8 million with an increase of 1.8% in finished products which was partly offset by decreases of 0.7% in raw materials and 0.1% in goods in process.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments went from 1.66:1 in July to 1.64:1 in August. The August value of 0.61:1 for the ratio of finished products inventory to shipments was virtually unchanged from July.
- The value of new orders received in August, seasonaly adjusted, increased 1.2% to \$21,114.5 million from the revised July estimate of \$20,864.1 million. In durable goods industries, new orders, with an estimated value of \$10,723.8 million, were 3.5% higher than the July value of \$10,356.3 million where increases of \$497.0 million in transportation equipment industries and \$105.6 million in fabricated metal products industries were partly offset by a decrease of \$258.8 million in primary metal industries. In non-durable goods industries, new orders were valued at \$10,390.7 million, down 1.1% from the revised estimate for July of \$10,507.8 million.
- The seasonally adjusted unfilled orders backlog at the end of August was \$22,733.2 million, up 0.7% from the revised July estimate of \$22,584.3 million. Unfilled orders increased 0.9% in durable goods industries to \$20,720.9 million from \$20,528.2 million at the end of July. In non-durable goods industries, unfilled orders were down 2.1% to \$2,012.4 million from \$2,056.0 million.
- Not adjusted for seasonal variation, manufacturers' shipments in August were estimated at \$20,089.6 million, 4.5% higher than the revised July value of \$19,222.8 million. Cumulative shipments for the first

POINTS SAILLANTS

Août 1985

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$20,965.5 millions en août 1985, soit une hausse de 1.5% par rapport à la valeur révisée de \$20,649.9 millions en juillet. Une augmentation de 3.4% a été enregistrée pour les biens durables qui sont passés de \$10,180.7 millions à \$10,531.2 millions. Cette hausse est principalement attribuable à des gains de \$241.8 millions dans les industries du matériel de transport, de \$91.2 millions dans les industries de la fabrication des produits métalliques et de \$83.3 millions dans les industries de la machinerie. Ces augmentations ont été en partie contrebalancées par une diminution de \$55.3 millions dans les industries de première transformation des métaux. Les livraisons des biens non durables ont diminué de 0.3% passant de \$10,469.2 millions à \$10,434.3 millions.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,375.9 millions en août, une hausse de 0.3% par rapport à la valeur du mois précédent de \$34,287.9 millions. Pour leur part, les stocks détenus ont augmenté de 0.3% à \$35,754.4 millions de \$35,640.8 millions. Des diminutions ont été enregistrées au chapitre des matières premières (- 0.7%), des biens en cours de transformation (- 0.1%) mais une augmentation de 1.8% a été enregistrée pour les produits finis.
- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisés est passé de 1.66:1 en juillet à 1.64:1 en août. Le rapport des produits finis aux livraisons, avec une valeur de 0.61:1 en août, est resté presqu'inchangé.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$21,114.5 millions, ce qui représente une hausse de 1.2% par rapport au mois précédent qui était de \$20,864.1 millions. Dans les industries des biens durables, la valeur estimative de \$10,723.8 millions était supérieure de 3.5% à la valeur de juillet de \$10,356.3 millions. Cette augmentation est principalement attribuable à des hausses de \$497.0 millions dans les industries du matériel de transport et de \$105.6 millions dans les industries de la fabrication des produits métalliques. Ces augmentations ont été en partie contrebalancées par une diminution de \$258.8 millions dans les industries de première transformation des métaux. Les nouvelles commandes des biens non durables ont atteint \$10,390.7 millions, soit une baisse de 1.1% par rapport à la valeur révisée de juillet (\$10,507.8 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,733.2 millions en août, une hausse de 0.7% par rapport à la valeur de juillet de \$22,584.3 millions. Les commandes en carnet des biens durables ont augmenté de 0.9% passant de \$20,528.2 millions à \$20,720.9 millions, alors que celles des biens non durables ont diminué de 2.1% à \$2,012.4 millions de \$2,056.0 millions.
- On a estimé à \$20,089.6 millions les livraisons non désaisonnalisées en août 1985, ce qui représente une hausse de 4.5% par rapport à la valeur révisée de juillet de \$19,222.8 millions. Pour les huit premiers mois de 1985, les livraisons estimatives ont

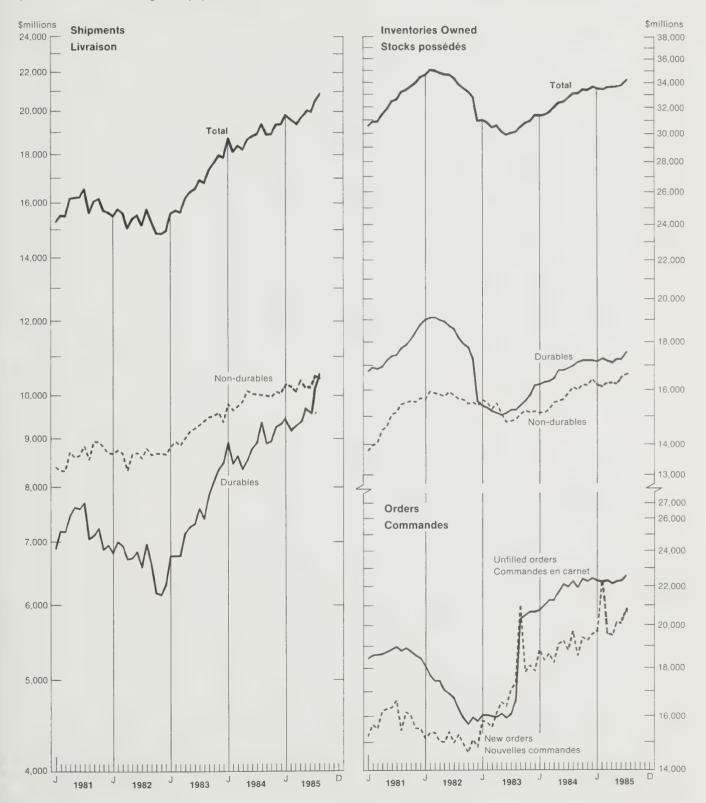

eight months of 1985, at an estimated \$158,685.8 million, were up 6.5% from the \$149,064.9 million estimated for the same period in 1984.

totalisé \$158,685.8 millions, soit une hausse de 6.5% par rapport à \$149,064.9 millions obtenus au cours de la période correspondante de 1984.

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries: goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

 For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified. systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun dès deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM, Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM, Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Inventories, shipments and orders in manufacturing industries

September 1985

Stocks, livraisons et commandes des industries manufacturières

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

Inventories, shipments and orders in manufacturing industries

September 1985

Projected from 1981 Census of Manufactures benchmarks.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.). Please see the explanation of the revisions on the following pages concerning the changes from the 1970 to the 1980 S.I.C.

Stocks, livraisons et commandes des industries manufacturières

Septembre 1985

Projections effectuées à partir des données de référence du recensement des manufactures de 1981.

Les tableaux que contient cette publication, sont depuis janvier 1985, basés sur la Classification Type des Industries 1980 (C.T.I.). Veuillez s.v.p. noter les explications données dans les pages suivantes concernant des changements entre la C.A.É. de 1970 et la C.T.I. de 1980.

HIGHLIGHTS

September 1985

- Preliminary estimates show the seasonally adjusted value of shipments in all Canadian manufacturing industries decreased 2.7% to \$20,357.8 million in September 1985, from the revised estimate of \$20,932.1 million in August, following increases of 1.4% in August and 3.8% in July. Shipments of durable goods were down 4.8% to \$9,990.1 million from \$10,488.7 million. Decreases of \$423.4 million in transportation equipment industries and \$63.0 million in machinery industries accounted for most of the decline. Shipments in non-durable goods industries were down 0.7% to \$10,367.7 million from \$10,443.4 million.
- Seasonally adjusted inventories owned by manufacturers at the end of September were \$34,391.7 million, up 0.1% from the previous month's revised value of \$34,353.6 million. Total inventories held increased 0.3% to \$35,840.7 million from \$35,731.7 million with increases of 0.4% in finished products, 0.3% in raw materials and 0.2% in goods in process.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments rose from 1.64:1 in August to 1.69:1 in September. The ratio of finished products inventory to shipments went from 0.61:1 to 0.63:1.
- The value of new orders received in September, seasonaly adjusted, decreased 4.1% to \$20,222.2 million from the revised August estimate of \$21,093.9 million. In durable goods industries, new orders, with an estimated value of \$9,848.0 million, were 7.9% lower than the August value of \$10,692.0 million. A decrease of \$822.1 million in transportation equipment industries accounted for most of the drop. In non-durable goods industries, new orders were valued at \$10,374.2 million, down 0.3% from the revised estimate for August of \$10,401.9 million.
- The seasonally adjusted unfilled orders backlog at the end of September was \$22,610.5 million, down 0.6% from the August estimate of \$22,746.1 million. Unfilled orders decreased 0.7% in durable goods industries to \$20,589.4 million from \$20,731.5 million at the end of August. In non-durable goods industries, unfilled orders were up 0.3% to \$2,021.1 million from \$2,014.6 million.
- Not adjusted for seasonal variation, manufacturers' shipments in September 1985 were estimated at \$21,-138.1 million, 5.3% higher than the revised August value of \$20,065.4 million. Cumulative shipments for the first nine months of 1985, at an estimated \$179,-799.7 million, were up 6.9% from the \$168,180.4 million estimated for the same period in 1984.

POINTS SAILLANTS

Septembre 1985

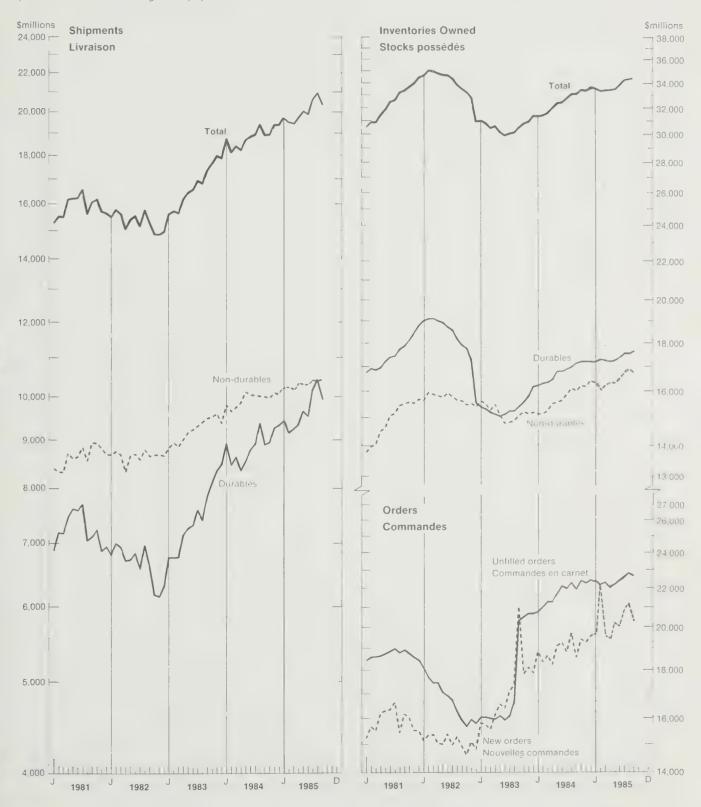

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$20,357.8 millions en septembre 1985, soit une baisse de 2.7% par rapport à la valeur révisée de \$20,932.1 millions en août. Cette baisse suit des augmentations de 1.4% en août et 3.8% en juillet. Une diminution de 4.8% a été enregistrée pour les biens durables qui sont passés de \$10,488.7 millions à \$9,990.1 millions. Cette baisse est principalement attribuable à des déclins de \$423.4 millions dans les industries du matériel de transport et de \$63.0 millions dans les industries de la machinerie. Les livraisons des biens non durables ont diminué de 0.7% passant de \$10,443.4 millions à \$10,367.7 millions.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,391.7 millions en septembre, une hausse de 0.1% par rapport à la valeur du mois précédent de \$34,353.6 millions. Pour leur part, les stocks détenus ont augmenté de 0.3% à \$35,840.7 millions de \$35,731.7 millions. Des augmentations ont été enregistrées au chapître des produits finis (+0.4%), des matières premières (+0.3%) et des biens en cours de transformation (+0.2%).
- Le rapport du total des stocks possédés désaisonnalisé aux livraisons désaisonnalisées est passé de 1.64:1 en août à 1.69:1 en septembre. Le rapport des produits finis aux livraisons est passé de 0.61:1 à 0.63:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$20,222.2 millions, ce qui représente une baisse de 4.1% par rapport au mois précédent qui était de \$21,093.9 millions. Dans les industries des biens durables, la valeur estimative de \$9,848.0 millions était inférieure de 7.9% à la valeur d'août de \$10,692.0 millions. Cette diminution est principalement attribuable à une baisse de \$822.1 millions dans les industries du matériel de transport. Les nouvelles commandes des biens non durables ont atteint \$10,374.2 millions, soit une baisse de 0.3% par rapport à la valeur révisée d'août (\$10,401.9 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,610.5 millions en septembre, une baisse de 0.6% par rapport à la valeur d'août de \$22,746.1 millions. Les commandes en carnet des biens durables ont diminué de 0.7% passant de \$20,731.5 millions à \$20,589.4 millions, alors que celles des biens non durables ont augmenté de 0.3% à \$2,021.1 millions de \$2,014.6 millions.
- On a estimé à \$21,138.1 millions les livraisons non désaisonnalisées en septembre 1985, ce qui représente une hausse de 5.3% par rapport à la valeur révisée d'août de \$20,065.4 millions. Pour les neuf premiers mois de 1985, les livraisons estimatives ont totalisé \$179,799.7 millions, soit une hausse de 6.9% par rapport à \$168,180.4 millions obtenus au cours de la période correspondante de 1984.

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries; goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM, Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM.

Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Inventories, shipments and orders in manufacturing industries

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTICE TO USERS

Estimates in this publication are subject to revision to accomodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- Basil McCormick, Assistant Director, Industry Division
- Henry Glouchkow, Chief, Inventories Shipments and Orders in Manufacturing Industries
- Jacques Lepage, Unit Head

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- Basil McCormick, Directeur adjoint, Division de l'industrie
- Henry Glouchkow, Chef, Stocks, livraisons et commandes des industries manufacturières
- Jacques Lepage, Chef de sous-section

HIGHLIGHTS

October 1985

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 1.5% to \$20,709.5 million in October 1985, from the revised estimate of \$20,412.6 million in September. This increase followed a decline of 2.5% in September. Shipments of durable goods were up 2.5% to \$10,229.0 million from \$9,983.0 million. An increase of \$218.7 million (+6.0%) in transportation equipment industries accounted for most of the gain. A \$71.0 million increase in food industries was the major contributor to a 0.5% increase in the non-durable goods industries as shipments rose from \$10,429.6 million to \$10,480.5 million.
- Seasonally adjusted inventories owned by manufacturers at the end of October totalled \$34,445.9 million, up 0.1% from the previous month's revised value of \$34,418.9 million. Total inventories held increased 0.1% to \$35,851.5 million from \$35,819.7 million, an increase of 1.3% in finished products being principally responsible for this rise. This was partly offset by decreases of 0.9% in raw materials and 0.1% in goods in process.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments declined from 1.69:1 in September to 1.66:1 in October. The ratio of finished products inventory to shipments remained at 0.62:1.
- The value of new orders received in October, seasonaly adjusted, increased 2.2% to \$20,737.9 million from the revised September estimate of \$20,288.6 million. In durable goods industries, new orders, with an estimated value of \$10,245.7 million, were 4.1% higher than the September value of \$9,843.7 million, with increases of \$310.9 million in transportation equipment industries, \$157.5 million in primary metal industries and \$98.6 million in electrical and electronic products industries having been only partly offset by a \$134.8 million decrease in fabricated metal products industries. In non-durable goods industries, new orders were valued at \$10,492.2 million, up 0.5% from the revised estimate of \$10,444.9 million for September.
- The seasonally adjusted unfilled orders backlog at the end of October stood at \$22,650.5 million, up 0.1% from the revised September estimate of \$22,622.1 million. Unfilled orders increased 0.1% in durable goods industries to \$20,609.0 million from \$20,592.3 million at the end of September. In non-durable goods industries, unfilled orders were up 0.6% to \$2,041.5 million from \$2,029.9 million.
- Not adjusted for seasonal variation, manufacturers' shipments in October 1985 were estimated at \$21,-990.5 million, 3.8% higher than the revised September value of \$21,190.9 million. Cumulative shipments for the first ten months of 1985, at an estimated \$201,-843.0 million, were up 7.2% from the \$188,278.7 million estimated for the same period in 1984.

POINTS SAILLANTS

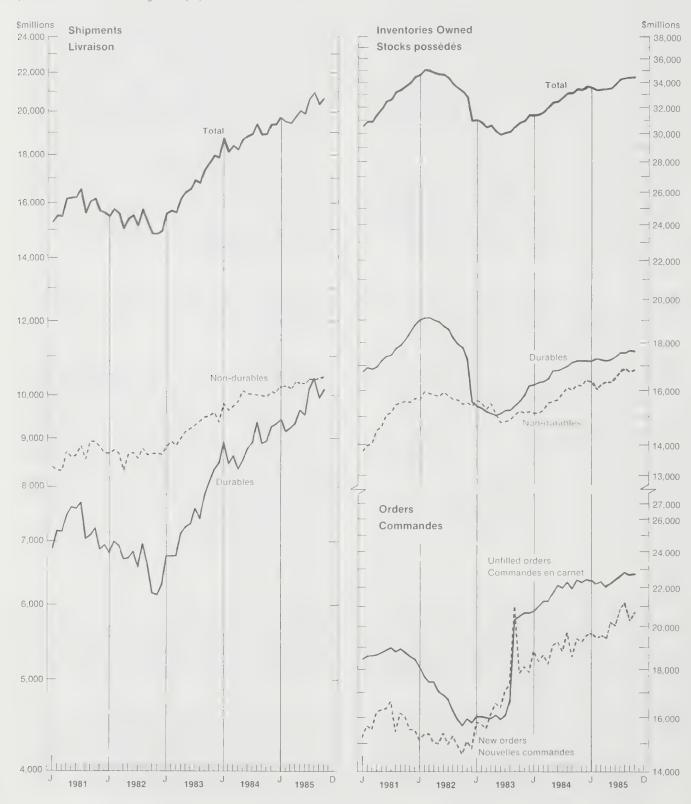

Octobre 1985

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$20,709.5 millions en octobre 1985, soit une hausse de 1.5% par rapport à la valeur révisée de \$20,412.6 millions en septembre. Cette hausse suit une baisse de 2.5% en septembre. Une augmentation de 2.5% a été enregistrée pour les biens durables qui sont passés de \$9,983.0 millions à \$10,229.0 millions. Cette hausse est principalement attribuable à un gain de \$218.7 millions (+6.0%) dans les industries du matériel de transport. Les livraisons des biens non durables ont augmenté de 0.5% passant de \$10,429.6 millions à \$10,480.5 millions. Cette hausse est attribuable à un gain de \$71.0 millions das les industries des aliments.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,445.9 millions en octobre, une hausse de 0.1% par rapport à la valeur du mois précédent de \$34,418.9 millions. Pour leur part, les stocks détenus ont augmenté de 0.1% à \$35,851.5 millions de \$35,819.7 millions. Des diminutions ont été enregistrées au chapître des matières premières (-0.9%) et des biens en cours de transformation (-0.1%) mais une augmentation de 1.3% a été enregistrée pour les produits finis.
- Le rapport du total des stocks possédés désaisonnalisé aux livraisons désaisonnalisées est passé de 1.69:1 en septembre à 1.66:1 en octobre. Le rapport des produits finis aux livraisons est inchangé à 0.62:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$20,737.9 millions, ce qui représente une hausse de 2.2% par rapport au mois précédent qui était de \$20,288.6 millions. Dans les industries des biens durables, la valeur estimative de \$10,245.7 millions était supérieure de 4.1% à la valeur de septembre de \$9,843.7 millions. Cette augmentation est principalement attribuable à des hausses de \$310.9 millions dans les industries du matériel de transport, de \$157.5 millions dans les industries de première transformation des métaux et de \$98.6 millions dans les industries des produits électriques et électroniques. Ces augmentations ont été en partie contrebalancées par une diminution de \$134.8 millions dans les industries de la fabrication des produits métalliques. Les nouvelles commandes des biens non durables ont atteint \$10,492.2 millions, soit une hausse de 0.5% par rapport à la valeur révisée de septembre (\$10,444.9 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,650.5 millions en octobre, une hausse de 0.1% par rapport à la valeur de septembre de \$22,622.1 millions. Les commandes en carnet des biens durables ont augmenté de 0.1% passant de \$20,592.3 millions à \$20,609.0 millions, alors que celles des biens non durables ont augmenté de 0.6% à \$2,041.5 millions de \$2,029.9 millions.
- On a estimé à \$21,990.5 millions les livraisons non désaisonnalisées en octobre 1985, ce qui représente une hausse de 3.8% par rapport à la valeur révisée de septembre de \$21,190.9 millions. Pour les dix premiers mois de 1985, les livraisons estimatives ont totalisé \$201,843.0 millions, soit une hausse de 7.2% par rapport à \$188,278.7 millions obtenus au cours de la période correspondante de 1984.

Manufacturer's Shipments, Inventories and Orders, 1981-1985 Les livraisons, les stocks et les commandes des fabricants, 1981-1985

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries; goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

 For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes

Tableaux 3-4

1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified. systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM, Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM.

Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

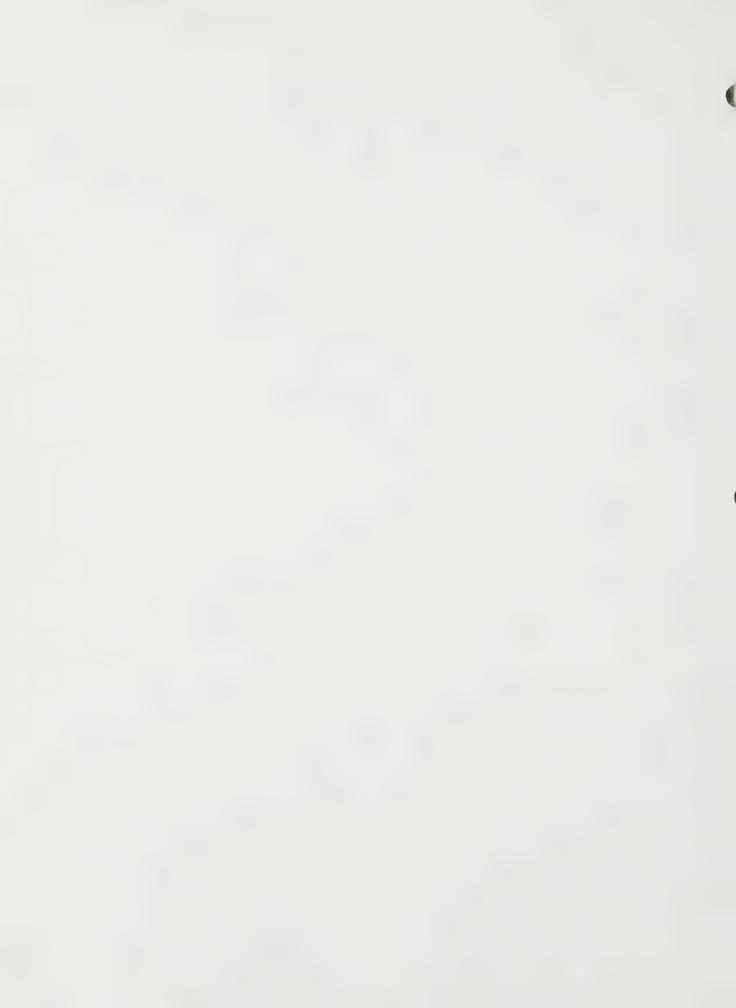

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Inventories, shipments and orders in manufacturing industries

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)

Inventories, shipments and orders in manufacturing industries

November 1985

Projected from 1981 Census of Manufactures benchmarks.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.). Please see the explanation of the revisions on the following pages concerning the changes from the 1970 to the 1980 S.I.C.

Stocks, livraisons et commandes des industries manufacturières

Novembre 1985

Projections effectuées à partir des données de référence du recensement des manufactures de 1981

Les tableaux que contient cette publication, sont depuis janvier 1985, basés sur la Classification Type des Industries 1980 (C.T.I.). Veuillez s.v.p. noter les explications données dans les pages suivantes concernant des changements entre la C.A.É. de 1970 et la C.T.I. de 1980.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTICE TO USERS

Estimates in this publication are subject to revision to accomodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- Basil McCormick, Assistant Director, Industry Division
- Henry Glouchkow, Chief, Inventories Shipments and Orders in Manufacturing Industries
- · Jacques Lepage, Unit Head

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- Basil McCormick, Directeur adjoint, Division de l'industrie
- Henry Glouchkow, Chef, Stocks, livraisons et commandes des industries manufacturières
- Jacques Lepage, Chef de sous-section

HIGHLIGHTS

November 1985

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 2.9% to \$21,302.7 million in November 1985 from the revised level of \$20,698.6 million in October. This increase followed a gain of 1.4% in October. Shipments of durable goods were up 3.9% to \$10,596.9 million from \$10,199.3 million. An increase of \$319.2 million in transportation equipment industries accounted for most of the gain. Increases of \$100.8 million in refined petroleum and coal products industries and \$91.5 million in chemical and chemical products industries were the major contributors to a 2.0% increase in the non-durable goods industries as shipments rose from \$10,499.3 million to \$10,705.8 million.
- Seasonally adjusted, inventories owned by manufacturers at the end of November totalled \$34,442.1 million, up 0.1% from the previous month's revised value of \$34,401.2 million. Total inventories held increased 0.2% to \$35,830.2 million from \$35,750.6 million, with increases of 1.3% in goods in process and 0.2% in finished products being only partly offset by a 0.5% decrease in raw materials.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments declined from 1.66:1 in October to 1.62:1 in November. The ratio of finished products inventory to shipments went from 0.62:1 in October to 0.60:1 in November.
- The value of new orders received in November, seasonally adjusted, increased 2.8% to \$21,315.9 million from the revised October estimate of \$20,733.5 million. In the durable goods industries, new orders, with an estimated value of \$10,572.1 million, were 3.3% higher than the October value of \$10,231.9 million. Increases of \$232.5 million in transportation equipment industries and \$209.4 million in fabricated metal products industries having been only partly offset by a \$129.6 million decrease in electrical and electronic products industries. In the non-durable goods industries, new orders were valued at \$10,743.8 million, up 2.3% from the revised estimate of \$10,501.6 million for October.
- The seasonally adjusted unfilled orders backlog at the end of November was \$22,670.3 million, up 0.1% from the revised October estimate of \$22,657.0 million. Unfilled orders decreased 0.1% in the durable goods industries to \$20,600.1 million from \$20,624.9 million at the end of October. In the non-durable goods industries, unfilled orders were up 1.9% to \$2,070.2 million from \$2.032.2 million.
- Not adjusted for seasonal variation, manufacturers' shipments in November 1985 were estimated at

POINTS SAILLANTS

Novembre 1985

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$21,302.7 millions en novembre 1985, soit une hausse de 2.9% par rapport à la valeur révisée de \$20,698.6 millions en octobre. Cette hausse suit un gain de 1.4% en octobre. Une augmentation de 3.9% a été enregistrée pour les biens durables qui sont passés de \$10,199.3 millions à \$10,596.9 millions. Cette hausse est principalement attribuable à un gain de \$319.2 millions dans les industries du matériel de transport. Les livraisons des biens non durables ont augmenté de 2.0% passant de \$10,499.3 millions à \$10,705.8 millions. Cette hausse est principalement attribuable à des gains de \$100.8 millions dans les industries des produits raffinés du pétrole et du charbon et \$91.5 millions dans les industries chimiques.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,442.1 millions en novembre, une hausse de 0.1% par rapport à la valeur du mois précédent de \$34,401.2 millions. Pour leur part, les stocks détenus ont augmenté de 0.2% à \$35,830.2 millions de \$35,750.6 millions. Des augmentations ont été enregistrées au chapitre des biens en cours de transformation (+ 1.3%) et des produits finis (+ 0.2%) mais une diminution de 0.5% a été enregistrée pour les matières premières.
- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.66:1 en octobre à 1.62:1 en novembre. Le rapport des produits finis aux livraisons est passé de 0.62:1 à 0:60:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$21,315.9 millions, ce qui représente une hausse de 2.8% par rapport au mois précédent qui était de \$20,733.5 millions. Dans les industries des biens durables. la valeur estimative de \$10,572.1 millions était supérieure de 3.3% à la valeur d'octobre de \$10,231.9 millions. Cette augmentation est principalement attribuable à des hausses de \$232.5 millions dans les industries du matériel de transport et \$209.4 millions dans les industries de la fabrication des produits métalliques. Ces augmentations ont été en partie contre-balancées par une diminution de \$129.6 millions dans les industries des produits électriques et électroniques. Les nouvelles commandes des biens non durables ont atteint \$10,743.8 millions, soit une hausse de 2.3% par rapport à la valeur révisée d'octobre (\$10,501.6 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,670.3 millions en novembre, une hausse de 0.1% par rapport à la valeur d'octobre de \$22,657.0 millions. Les commandes en carnet des biens durables ont diminué de 0.1% passant de \$20,624.9 millions à \$20,600.1 millions, alors que celles des biens non durables ont augmenté de 1.9% à \$2,070.2 millions de \$2,032.2 millions.
- On a estimé à \$21,349.9 millions les livraisons non désaisonnalisées en novembre 1985, ce qui représente une baisse de 2.9%

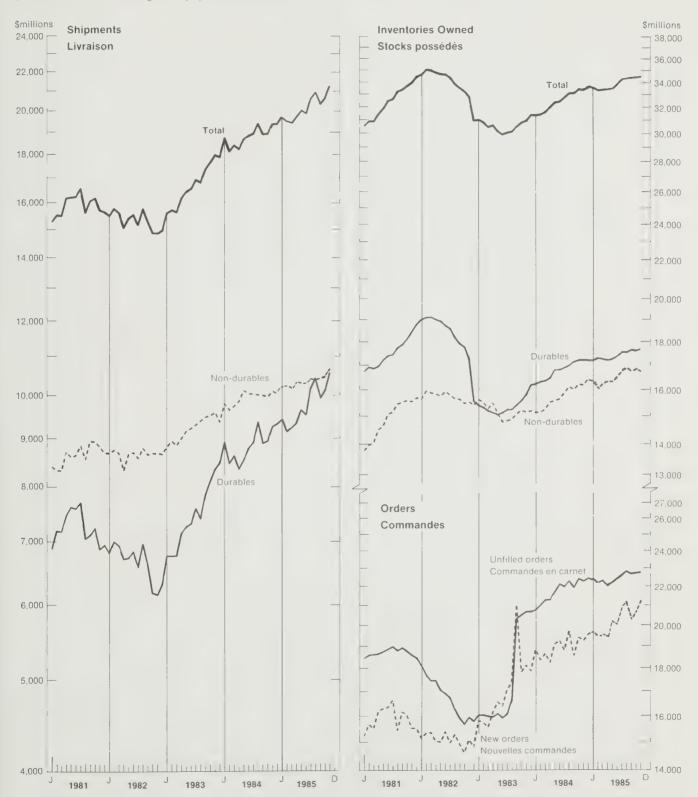

\$21,349.9 million, 2.9% lower than the revised October value of \$21,979.8 million. Cumulative shipments for the first eleven months of 1985, at an estimated \$223,-182.1 million, were up 7.2% from the \$208,231.4 million esitmated for the same period in 1984.

par rapport à la valeur révisée d'octobre de \$21,979.8 millions. Pour les onze premiers mois de 1985, les livraisons estimatives ont totalisé \$223,182.1 millions, soit une hausse de 7.2% par rapport à \$208,231.4 millions obtenus au cours de la période correspondante de 1984.

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries; goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- (1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

 Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified. systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM.

Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM.

Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTICE TO USERS

Estimates in this publication are subject to revision to accomodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- Basil McCormick, Assistant Director, Industry Division
- Henry Glouchkow, Chief, Inventories Shipments and Orders in Manufacturing Industries
- Jacques Lepage, Unit Head

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- Basil McCormick, Directeur adjoint, Division de l'industrie
- Henry Glouchkow, Chef, Stocks, livraisons et commandes des industries manufacturières
- Jacques Lepage, Chef de sous-section

HIGHLIGHTS

December 1985

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 0.7% to \$21,335.1 million in December 1985 from the revised estimate of \$21,182.7 million in November. This increase followed a gain of 2.3% in November. A \$208.3 million increase in food industries was the major contributor to a 2.1% increase in the non-durable goods industries as shipments rose from \$10,681.2 million to \$10,905.3 million. Shipments of durable goods industries were down 0.7% to \$10,429.7 million from \$10,501.5 million. A decrease of \$128.4 million in fabricated metal products industries accounted for most of the decline.
- Seasonally adjusted, inventories owned by manufacturers at the end of December totalled \$34,386.6 million, up 0.1% from the previous month's revised value of \$34,355.3 million. Total inventories held increased 0.3% to \$35,844.1 million from \$35,751.7 million, with an increase of 3.9% in goods in process being only partly offset by decreases of 1.6% in finished products and 0.4% in raw materials.
- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments declined from 1.62:1 in November to 1.61:1 in December. The ratio of finished products inventory to shipments went from 0.61:1 in November to 0.59:1 in December.
- The value of new orders received in December, seasonally adjusted, increased 2.2% to \$21,627.2 million from the revised November estimate of \$21,158.3 million. In the durable goods industries, new orders, with an estimated value of \$10,753.6 million, were 3.1% higher than the November value of \$10,431.5 million. Increases of \$154.0 million in machinery industries, \$138.9 million in electrical and electronic products industries and \$98.1 million in transportation equipment industries accounted for most of the gain. In the non-durable goods industries, new orders were valued at \$10,873.7 million, up 1.4% from the revised estimate of \$10,726.9 million for November.
- The seasonally adjusted unfilled orders backlog at the end of December was \$22,924.8 million, up 1.3% from the revised November estimate of \$22,632.7 million. Unfilled orders increased 1.6% in the durable goods industries to \$20,878.7 million from \$20,554.8 million at the end of November. In the non-durable goods industries, unfilled orders were down 1.5% to \$2,046.2 million from \$2,077.9 million.
- Not adjusted for seasonal variations, manufacturers' shipments in December 1985 were estimated at \$19,-798.4 million, 6.8% lower than the revised November value of \$21,232.1 million. Cumulative shipments for the year 1985, at an estimated \$242,862.7 million,

POINTS SAILLANTS

Décembre 1985

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à \$21,335.1 millions en décembre 1985, soit une hausse de 0.7% par rapport à la valeur révisée de \$21,182.7 millions en novembre. Cette hausse suit un gain de 2.3% en novembre. Les livraisons des biens non durables ont augmenté de 2.1% passant de \$10,681.2 millions à \$10,905.3 millions. Cette hausse est principalement attribuable à un gain de \$208.3 millions dans les industries des aliments. Une diminution de 0.7% a été enregistrée pour les biens durables qui sont passés de \$10,501.5 millions à \$10,429.7 millions. Cette baisse est principalement attribuable à une perte de \$128.4 millions dans les industries de la fabrication des produits métalliques.
- La valeur désaisonnalisée du total des stocks possédés était de \$34,386.6 millions en décembre, une hausse de 0.1% par rapport à la valeur révisée du mois précédent de \$34,355.3 millions. Pour leur part, les stocks détenus ont augmenté de 0.3% à \$35,844.1 millions de \$35,751.7 millions. Des diminutions ont été enregistrées au chapître des produits finis (-1.6%) et des matières premières (-0.4%) mais une augmentation de 3.9% a été enregistrée pour les biens en cours de transformation.
- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.62:1 en novembre à 1.61:1 en décembre. Le rapport des produits finis aux livraisons est passé de 0.61:1 à 0.59:1.
- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à \$21,627.2 millions, ce qui représente une hausse de 2.2% par rapport au mois précédent qui était de \$21,158.3 millions. Dans les industries des biens durables, la valeur estimative de \$10,753.6 millions était supérieure de 3.1% à la valeur de novembre de \$10,431.5 millions. Cette augmentation est principalement attribuable à des hausses de \$154.0 millions dans les industries de la machinerie, \$138.9 millions dans les industries des produits électriques et électroniques et \$98.1 millions dans les industries du matériel de transport. Les nouvelles commandes des biens non durables ont atteint \$10,873.7 millions, soit une hausse de 1.4% par rapport à la valeur révisée de novembre (\$10,726.9 millions).
- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à \$22,924.8 millions en décembre, une hausse de 1.3% par rapport à la valeur de novembre de \$22,632.7 millions. Les commandes en carnet des biens durables ont augmenté de 1.6% passant de \$20,554.8 millions à \$20,878.7 millions, alors que celles des biens non durables ont diminué de 1.5% à \$2,046.2 millions de \$2,077.9 millions.
- On a estimé à \$19,798.4 millions les livraisons non désaisonnalisées en décembre 1985, ce qui représente une baisse de 6.8% par rapport à la valeur révisée de novembre qui était de \$21,232.1 millions. Pour l'année 1985, les livraisons estimatives ont totalisé \$242,862.7 millions, soit une hausse de 7.5%

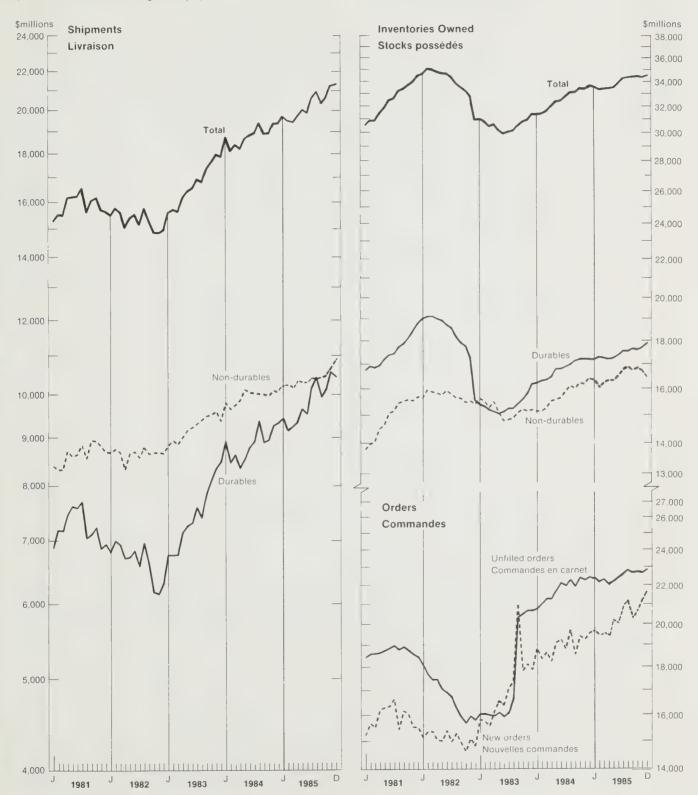

were up 7.5% from last hear's total of \$225,970.5 million.

par rapport à l'année précédente qui était de \$225,970.5 millions.

FOOTNOTES

Table 1

- Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
- (2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 5th paragraph for more details.

Tables 3-4

(1) Series in Table 3, which contain no significant seasonality, include: raw materials in the petroleum industries; goods in process in the primary metal industries; and inventory held but not owned in the transportation equipment industries and in Table 4: the series for unfilled orders in the export-oriented industries and supplementary classification - automotive products industries; and raw materials in the supplementary classification - automotive products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

 For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 5th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

- (1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
- (2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries du tableau 3, qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière, les biens en cours dans les industries de première transformation les métaux, les stocks détenus mais non possédés dans les industries du matériel de transport et du tableau 4: la série des commandes en carnet dans les industries orientées vers l'exportation et dans la classification complémentaire-industries connexes de l'automobile, ainsi que les matières premières dans la classification complémentaire-industries connexes de l'automobile. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 5ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified. systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1981 Census. Values for years prior to 1981 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received.

Revisions

Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Les valeurs doivent être imputées pour les établissements qui n'ont pas rapporté à temps pour la compilation des estimées mensuelles. Cette imputation se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations.

Révisions

Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM, Application Consulting Section, Statistics Canada, Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,

Section de consultants aux applications, Statistique Canada, Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.
